

# Commercial Real Estate Information Made Beautiful

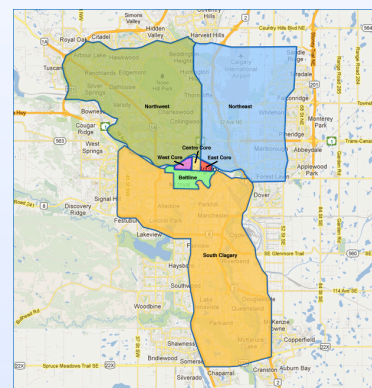

## Altus InSite and Cube Cities Partner to Communicate Quality Data with Stunning Visuals

Altus InSite and Cube Cities are partnering to innovate in the presentation and analysis of information for the commercial real estate marketplace. Real estate professionals rely on consistent and timely data to identify opportunities and mitigate risks. Visualizing data in the right location and context is more informative and actionable than when presented in raw or numeric formats.

### View Statistical Boundaries

View full-colour, static statistical geography maps showing each of our six major [office markets](#) in Canada, as well as maps for each of the districts, and the nodes within each district, for those markets. Maps are also available for the statistical boundaries of our [Toronto Industrial](#) market and district boundaries. More markets to follow.

### 3D Cube View Snapshots of Inventory and Available Space

Over the coming months, Altus InSite and Cube Cities will introduce 3D services in multiple phases, starting with static 3D images visualizing a recent snapshot of the inventory and available spaces for the Downtown districts in each of [Vancouver](#), [Calgary](#) and [Toronto](#). Interested subscribers can obtain updated versions of these snapshots upon request.\*

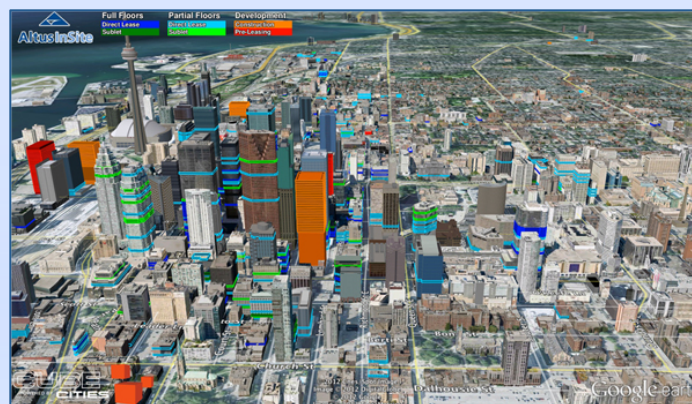

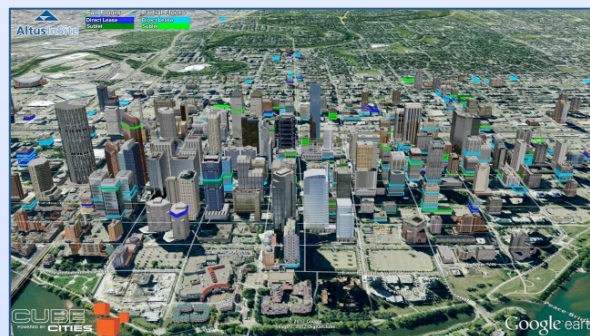

### Visualize Inventory and Available Space

As we launch new features, subscribers will be able to visualize the available spaces in a building through building-specific 3D flights. Additional options including updated static views of the available spaces in a specific market, current snapshots of new supply, 3D visualization options and custom presentation flights can be created to match your specific requirements.\*

To experience the new Cube Cities visualization capabilities, we have created a [promotional movie](#) which includes flights of a snapshot of the the available spaces in Vancouver, Calgary and Toronto.

Altus InSite subscribers with access to Toronto, Calgary and Vancouver office markets will soon be able to upgrade their paid subscriptions to include Cube Views. In addition, updated and customized flights can be prepared for a fixed fee for you to use internally or distribute to clients, targeted clients, investors, lenders and other stakeholders.
